

# TRAVEX FEUTERS

## 1-Home page:

### A- NAV Bar :

-register& log in button

-''About'' button (guide to page that include infos about the idea of the project)

### B- Body :

#### PART ONE :

-search bar that include buttons to help the Travel agencies to be more specific :

- 1- Date (check in , check out)
- 2- Place
- 3- Name of the hotel
- 4- How much room

# TRAVEX FEUTERS

## PART TWO :

- Hotels suggestion includes infos and main photo
- C2A button and when click it open the main screen of the hotel

## PART THREE :

# TRAVEX FEUTERS

-this page will appear when travel agency click on the CTA button of the hotel suggested and this what include :

- Hotel Name
- Hotel photos
- Hotel exact place
- Hotel stars
- Hotel description
- Hotel Advantages (gym - free wifi - pool - high security)
- Hotel price (per night)

**Book Accommodation**

B2B NET RATE  
Agency Exclusive €140 /night

CHECK IN: 24 Oct 2024  
CHECK OUT: 28 Oct 2024

ROOMS NEEDED: 1  
GUESTS: 2

LEAD GUEST NAME: e.g. Samir Rahmani

Estimated B2B Total €560

**Confirm B2B Booking**

- check in / check out Date
- Rooms number
- type of Rooms (single , family , couple)
- the price in DZD ( might be automatically calculated so the agency can see the total cost)
- CTA button to confirm booking

## Payment Split Logic (Only for Online Gateways):

# TRAVEX FEUTERS

1. Total Amount (Gross\_Amount) is captured by TRAVEX Platform Account.
2. Platform computes Engine Logic:
  - $\text{TRAVEX\_Share} = \text{Gross\_Amount} * 0.05$
  - $\text{Vendor\_Share} = \text{Gross\_Amount} - \text{TRAVEX\_Share}$
3. System triggers an automated transfer routing Vendor\_Share to the Hotel's registered Bank/CCP account.
4. Update Booking\_Status to "Confirmed" and update database tables.

## Offline Payment, Inventory Locking and Commission Enforcement (For CTO)

To prevent double-booking while ensuring payment verification, the offline pipeline will enforce a Temporary Hold on inventory, followed by an Automated Commission Ledger and Suspension System for hotels.

### A- The Dynamic Booking and Inventory Lock Workflow (Step-by-Step)

#### 1. Step 1: The Booking Lock (Temporary Hold)

\* **When the Travel Agency** selects Offline Payment and clicks Confirm, the chosen rooms and their specific details are instantly marked as unavailable in the public marketplace for the duration of the requested dates.

\* **Database State:** The booking status updates to status: "On Hold / Pending Receipt Upload". The room count is locked temporarily so no other agency can book them, but they are not yet officially owned by the agency.

\* **Direct Payment:** The agency is instructed to pay directly to the Hotel's official CCP/Bank account (NOT to TRAVEX).

#### 2. Step 2: The 48-Hour Upload Deadline and Overlay Prompt

\* The Travel Agency has a strict deadline of exactly 48 hours from the moment of clicking Confirm to complete the payment at the post office or bank and upload the receipt document.

# TRAVEX FEUTERS

\* **When the agency** rep logs back in or returns to their dashboard, a persistent modal/window layout awaits them, blocking other actions until they upload the payment receipt (PDF or image).

\* **System Auto-Cancellation (Edge Case):** If the 48-hour window expires and the agency fails to upload the receipt, the system automatically triggers a pipeline that updates the booking to status: "Cancelled - Deadline Expired", releases the locked room stock back to the public marketplace instantly, and removes the restriction, ensuring no time-burden or loss of revenue is placed on the hotel.

\* **Once they upload and submit** the receipt within the 48-hour limit, the status shifts to status: "Awaiting Admin Verification".

## 3. Step 3: Super Admin Audit and Resolution

\* **The uploaded receipt** document routes directly to the Super Admin Panel for manual check.

\* **If Verified (Approved):** The admin clicks confirm. The booking transitions to status: "Confirmed", the ownership is permanently assigned to the agency, and the system dynamically calculates the 5% commission based on the formula: Platform Commission = Total Booking Cost multiplied by 0.05.

\* **This calculated fee** is instantly appended to the Hotel's active billing log.

## B- Hotel Commission Ledger and Auto-Suspension System

To maintain cash flow and protect platform revenue, the backend must run an automated billing engine:

### 1. Live Commission Visibility:

\* **Hotels must** have a dedicated section in their Hotel Inventory and Management Page displaying a real-time ledger of all successful offline commissions tracked by the platform. They can inspect their accumulated debt clearly at any chosen time.

### 2. The End-of-Month Invoice Execution (Cron Job):

\* **At the end of every calendar month**, the system aggregates all logged commissions and generates a formal monthly invoice.

# TRAVEX FEUTERS

\* **The status changes to invoice status:** "Issued / Awaiting Settlement".

## 3. The Grace Period and Auto-Suspension Logic (Edge Case Control):

\* **Month 1 (Grace Period):** The hotel has exactly one full month to settle the invoice externally via our official channels. The platform functions normally.

\* **Month 2 (Suspension Trigger):** If the invoice remains unpaid after the **1-month grace period ends, the system automatically triggers an automated pipeline:**

\* **The hotel's visibility flag in the database updates to is visible:** false.

\* **Result:** The hotel instantly and automatically disappears from the search directory and the AI-Populated Hotels Marketplace, preventing any new incoming B2B bookings.

\* **Reactivation Logic:** The moment the Super Admin verifies the hotel's commission payment receipt, the system triggers is visible: true, instantly restoring their profile and inventory to the live marketplace.

## C-bottom of the web

- include help buttons like (contact us , consumer help , call us , About)
- Also way to share the website and to contact our gmail and phone number

# TRAVEX FEUTERS

## 2-register page :

 **Property Information**

Legal Property Name

Property Type

Street Address

City

Country

 **Identity & Credentials**

Tax ID / VAT Number

Registry License No.

  
Upload Business Registration Document  
PDF, JPG or PNG (Max 5MB)

-this page have to be the way that we confirm if that REALLY a travel agency or if that REALLY a Hotel , so we need these infos :

## Step-by-Step Registration & Verification Pipeline

### Step 1: Identity Selection (Account Type Selector)

The user chooses their specific business identity via two prominent clickable blocks: [I am a Travel Agency] or [I am a Hotel/Accommodation Provider].

### Step 2: Basic Credentials & Business Info (Data Entry)

Legal Corporate Name: Input field for the company's official name as registered in legal documents.

Owner/Representative Full Name: Full name of the operating company owner or legal manager.

# TRAVEX FEUTERS

Official Phone Number: Primary corporate telephone connectivity input field accompanied by an Algerian Wilaya/State address dropdown matrix.

## **Step 3: Document Upload Center (Drag & Drop Zone)**

**Dedicated file upload slots (supporting PDF or Image formats) for:**

Commercial Registry (Registre du Commerce): Mandatory validation document.

Tourism & Operating License: Official certification issued by the Algerian Ministry of Tourism.

Tax Card (Carte Fiscale / NIF): Mandatory for entity tax status tracking.

**⚠ Mandatory Warning Label: "Files must be clear and readable for admin manual approval. Your account will enter a locked 'Awaiting Review' state until the files are verified."**

-Add "i agree the policy" button

-when a travel agency or hotel Register in the website add notifications button and add profile Button that let him change easy and non sensitive information like pfp and the agency name

**3-Log in :**

# TRAVEX FEUTERS

-Add a google authentication button

## 4-Hotel users page :

This section defines the backend logic, state machine, and UI requirements for the Hotel Provider's dedicated management page.

### A- Property Profile, Payment Preferences and Legal Verification Setup

#### 1. Financial, Payment Preferences and Ownership Credentials:

**\* Payment Method Acceptance Toggle:** A mandatory configuration setting allowing the hotel to select how they want to receive payments from travel agencies. They can choose between: [Online Payments Only], [Offline Payments Only], or [Both Payment Methods Supported]. The frontend marketplace will dynamically

# TRAVEX FEUTERS

adjust the available booking CTA routes for agencies based on this configuration.

- \* **Offline Credentials (Conditional):** If the hotel enables offline payments, input fields are rendered to capture their official Post Office CCP or Bank RIB account numbers.

- \* **Ownership Verification Protocol:** A mandatory file upload trigger where the hotel must upload a legal document (e.g., Bank/Post Office Identity Document or Check Copy) to verify that the provided account matches the commercial entity name. The profile remains unverified until manually confirmed by Super Admin.

## 2. Location and Geographic Mapping:

- \* **Basic Address Fields:** Inputs for Hotel Name, full physical address, and a dropdown matrix for the Algerian Wilaya/State.

- \* **Interactive Google Maps Integration:** Embedding a Google Maps API component. The hotel can interact with the map, and clicking/dropping a pin on their exact location automatically extracts the precise Latitude and Longitude coordinates, storing them in the database to link directly with the marketplace mapping filter.

## 3. Marketing and Visual Assets:

- \* **Hotel Description:** A large text area input dedicated to the property's promotional overview.

# TRAVEX FEUTERS

- \* **General Hotel Amenities (Hotel-Level):** A multi-select checkbox matrix for active core amenities (e.g., Free Wi-Fi, GYM, Pool, Parking, Meeting Rooms) that renders as dynamic icon badges on the frontend.
- \* **Media Gallery Container:** A drag-and-drop file uploader for primary hotel exterior/interior gallery photographs.

## B- Room Inventory and Automated Availability Engine

### 1. Dynamic Room Creation Form:

- \* **Room Customization Fields:** Inputs for Room Type designation (Single, Double, Triple, Family Suite), exclusive nightly B2B pricing rates, and dedicated upload components for individual room category thumbnail images.
- \* **Dynamic Stock Adjustment:** An incremental counter interface allowing hotels to easily increase or decrease the total number of physical rooms available in their inventory stock at any time.

### 2. Automated Availability and Calendar Engine (Core Logic):

- \* **Manual Override Toggle:** For each room or block of rooms, the hotel can manually toggle the status badge between "Available" or "Booked".
- \* **Manual Lock with Expiry:** If the hotel manually sets a room to "Booked" (due to an external walk-in guest), the system prompts them to configure a specific date

# TRAVEX FEUTERS

range or duration. The system locks these rooms instantly.

**\* Automatic Release Trigger (Cron Job):** The moment the manually configured duration expires, the backend automatically triggers a status update shifting the room back to "Available" without requiring human intervention.

**\* Automated Marketplace Booking Interlocking:** When an agency completes a successful booking transaction directly through the TRAVEX platform, the system automatically decrements the specific room count and marks the exact selected rooms as "Booked" and completely unavailable for any other B2B queries during that specified duration. Once the check-out date passes, the engine automatically restores the room availability count to the public marketplace pool.

## **5-Super Admin Pager:**

The Super Admin Panel serves as the central command, auditing, and financial clearing hub for the TRAVEX platform. It must strictly enforce regulatory compliance, verify multi-party offline financial pipelines, and manage the platform's automated enforcement logic.

## **A- Core Modules and Architectural Requirements**

### **The Business Trust and Document Verification Pipeline:**

# TRAVEX FEUTERS

**-Unified Verification Queue:** A real-time datatable capturing all newly registered entities whose state is locked at status: "Awaiting Review". It must display corporate names, entity type (Agency or Hotel), owner names, and phone numbers.

**-Native Document Viewer Modal:** An integrated interface allowing the administrator to instantly inspect uploaded structural corporate files (Commercial Registry, Tax Card/NIF, and Tourism License) side-by-side directly on the screen without triggering external file downloads.

**-Direct Action Dispositions:** Equipped with a green [Approve & Verify Account] trigger to grant immediate live platform access, and a red [Reject & Deny Application] trigger accompanied by a mandatory text-input field to document the exact rejection reason sent back to the applicant.

## **Offline Transaction and Receipt Auditing Module:**

**-Pending Payment Ledger:** A dedicated ledger tracking bookings sitting at status: "Awaiting Payment Verification". It displays the travel agency identity, targeted hotel, total contract value, and the corresponding 5% platform commission allocation.

**-Receipt Matcher and Clearance Logic:** Renders the uploaded bank or post office transaction stamp receipt copy. Once the admin manually verifies that the offline funds successfully landed in the hotel's account, clicking

# TRAVEX FEUTERS

[Confirm Clearance] updates the record state to status: "Confirmed", decrements room stock, and appends the fee metadata to the billing ledger.

## **Commission Ledger, Invoicing and Auto-Suspension Override:**

**-Live Platform Revenue Tracker:** A real-time telemetry dashboard monitoring the aggregate volume of active 5% fees generated across all successful bookings.

**-Monthly Invoice Management Matrix:** Tracks the state of generated monthly hotel invoices, separating profiles into [Paid], [Within Grace Period], or [Overdue / Suspended].

**-Visibility Control System:** Displays the directory of hotels whose accounts have been automatically hidden (`is_visible: false`) by the system cron job due to non-payment of invoices. It grants the admin a manual override toggle to restore visibility (`is_visible: true`) immediately upon verification of the platform settlement receipt.

## **Platform Health and Growth Analytics Dashboard:**

**-Aggregated KPI Counters:** Real-time counter components monitoring total active and validated travel agencies, total active and validated hotel providers, and total Gross Transactional Volume (GTV) traversing the

# TRAVEX FEUTERS

marketplace ecosystem (highly critical for National Startup Label evaluation metrics).
